DON'T GET CAUGHT OUT BY DATA

Locate all sensitive data before the fraudsters do

Do you know where all the sensitive data is located in your organisation? What vulnerabilities it represents? How to monitor sensitive data on an on going basis? The truth is most organisations don't.

But with Data Discovery from Compliance3 you can.

Data Discovery locates all sensitive data across your organisation and helps prepare a coherent data protection strategy in line with all required regulations – from the Data Protection Act and the new General Data Protection Regulation to the Payment Card Industry Data Security Standard.

Protect YOUR organisation

Remote working and different systems and devices mean that the probability of data being found outside of the expected or core data stores is increased. Furthermore, the prolific use of mobile devices and growing acceptance of 'Bring Your Own Device' means that the IT function has reduced visibility of where information is being stored.

If we add to the mix that, on average, although approximately 44% of corporate data is already in the cloud only 30% of it is encrypted, it is highly likely that most organisations' data security measures are not compliant.

Act NOW

In the last 12 months*, 90% of large organisations and 74% of small organisations experienced some kind of data breach. Most experienced more than one, with the average being four. 76% of data compromises were achieved using low difficulty attack methods, 49% were due to malicious or criminal attack, 28% due to human error and 23% the result of a systems fault.

These statistics confirm what we already know: it's vital to protect ALL sensitive data. And to do that, you need to know WHERE the data is.

Although organisations often invest in solutions to prevent data loss, the fact is these solutions only flag data that has been lost, or accessed or moved inappropriately. As this is tantamount to counting the horses as they gallop across the paddock away from the unlocked stable, their value is limited. As a major retailer put it: "A £2M solution that costs a further £20M to deploy."

Compliance3's fully managed Data Discovery service helps organisations achieve data compliance in their contact centres and minimises their exposure to data breaches. We use only robust, tried and tested methodologies and market-leading technology.

We start by scanning the organisation's entire data environment to locate all sensitive data and ensure that card or other sensitive or personal data is not being stored insecurely. At least 95 types of sensitive customer and employee information is searched for and retrieved from servers, workstations, email accounts, databases, cloud and other storage locations used across the entire organisation. To do this, we use the most advanced data security software money can buy from Ground Labs.

Ground Labs: Key features

- Automated scanning as a 'Business as usual' process
- Search and retrieval of over 95 types of data
- Search of ALL enterprise data stores
- Central audit initiation
- Accurate compliance reporting

Compliance3 can help you identify exactly what sensitive data you're storing - what's inside every single file across your network - without any guesswork or assumptions. And when we know what's being stored and where, the risks become clear and we take action to mitigate them."

Glenn Hurley, CEO, Compliance3

This core – yet fundamental – step to becoming secure and compliant is not a one off initiative. We make regular scanning an automated 'business as usual' process, helping to protect your organisation all year round.

Armed with vital intelligence into what the vulnerabilities are and where they lie, Compliance3 helps you to plan appropriate remedial actions and prevent these threats from reoccurring in the future. We also work with you to assess the effectiveness of Data Discovery on a regular basis to ensure the technology delivers value and that you respond to identified and potential risk in the best possible way each time, every time.

Beat the fraudsters. Find and eliminate data storage vulnerabilities. Get in touch to arrange a demo or free trial.

About Compliance3

Compliance3 helps organisations with contact centres to cost-effectively achieve and maintain personal and payment card data compliance. In doing so, we help protect our clients' revenues and margins and significantly reduce the risk of reputational damage and hefty fines – as well as the costs associated with compliance.
